## Employment History

Senior Frontend Developer at Calibrium AI,  
January 2023 ? Present

Developed reusable UI components using React, boosting team productivity and code consistency  
Implemented responsive design principles to ensure seamless performance across devices  
Collaborated with UX designers and backend developers to build user-centric web applications  
Integrated RESTful APIs into the frontend architecture for smooth data handling and real-time updates  
Frontend Developer at Philia, Mashhad  
June 2023 ? Present

Contributed to the development of a robust SaaS platform focused on enhancing customer engagement and loyalty  
Built dual dashboard panels for business and client users with features such as reward creation, client dashboard management  
Utilized React.js, Material UI, and React Query for the Business Panel; used Next.js and Material UI for the Client Panel  
Developed interactive game components (e.g., prize wheel, slot machine) to boost user engagement  
Implemented seamless data import functionality and ensured real-time updates via RESTful API integration  
Enhanced overall UI/UX for a fully responsive and accessible user interface  
Delivered supporting tools, including a Chrome extension and a WHMCS module for automatic data synchronization  
This role required deep expertise in React.js, Next.js, and UI frameworks to create a high-quality, dynamic user experience  
Frontend Developer at Limoo Host, Mashhad  
April 2022 ? Present

Designed and developed campaign websites using HTML5, CSS3, and JavaScript  
Created a custom UI component library to standardize design patterns and accelerate frontend development  
Improved developer productivity and ensured code reusability across multiple projects  
Collaborated with design and backend teams to implement responsive, SEO-friendly interfaces  
Full-stack Developer at Deviatech, Mashhad  
February 2018 ? Present

Developed and maintained multiple web applications with seamless integration between frontend and backend systems  
Worked across the full stack using technologies such as PHP, MySQL, JavaScript, and Golang  
Enhanced user interfaces for better usability and responsiveness across various devices
